# About Us

---

## Work Apps Canada – Leveraging Technology the Creative Way

Work Apps Canada is a mobile application and website development firm that caters to small to medium sized businesses in Canada. With a young and passionate team on board, we strive to create powerful, innovative, and creative technologically advanced solutions for a rich user experience.

Working closely with leading agencies, brands, and budding entrepreneurs throughout Canada, our main goal is to bring your creative vision to life with our technical knowledge and extensive experience in the web and mobile app domain.

## How We Started Out

A large number of Canadian small businesses have been losing online dollars to their counterpart competitors in America because of one key factor - lack of a strong and updated online presence. Even though Canadians have the highest smart phone adoption worldwide, with over 70% of internet users browsing via mobile devices, just 42% of Canadian businesses have updated websites and the number of mobile friendly websites is even lower.

The reason? Extremely high cost of services for web and mobile app development locally which most small businesses and startups can't afford.

**But we are here to change things.**

We built Work Apps Canada with one key focus in mind – reducing costs for web and mobile app development without compromising on the quality and outlook.

## How We Do It

Work Apps Canada is a nationwide service provider with offices in four of Canada's largest cities. Instead of capitalizing on our client's investment, we let creativity and talent take center stage. Work Apps hires

recent graduates through a government program so that our clients get the best rates as well as the best of talent. That combined with our creative insight, industry experience as well as strategized approach makes for a powerful and significant online presence that provides your business the boost it needs!

## What Makes Us Unique?

Get in touch with Work Apps Canada if you are looking for:

- Powerful, unique, and interactive mobile apps for all leading platforms such as Android, iPhone, and Blackberry
- Mobile responsive, scalable, and user friendly websites
- Mobile-web integration for enhanced functionality while surfing
