

Registered Nurse

Being a Registered Nurse is one of the most responsible jobs overall. Nurses are the people who literally take care of you when you need it the most. They provide direct patient care in collaboration with the physicians and doctors. It is a Nurse's duty to make sure that the prescribed process of diagnosis, medication and treatment is carried out accordingly and smoothly. The recovery and rehabilitation of a patient depends highly on the amount of care and dedication that the Nurse puts in.

The duties of RN start from monitoring the vital signs of the patients, instructing and educating the patients and general public, looking after patients comfort and hygiene and managing primary health care to the more specialized ones. These specialized duties vary with many factors that may include the work settings, specified organs, conditions or population they have to deal with.

Apart from being very caring, sympathetic, sensitive and affectionate, a nurse has to have extremely strong nerves and complete emotional control. If you think you have the passion to serve humanity than this just might be the right profession for you.

Where to Start?

To be a Registered Nurse there is a process that has to be followed accordingly.

- I. Associate Degree in Nursing (ADN):
This should be the point where you should pick up after your High school education. This is a two year degree program to prepare you for a Bachelors degree.
- II. Bachelors of Science Degree in Nursing (BSN):
This is generally a four year program that provides you advance knowledge in the field of Nursing. After this degree you can apply for your practicing license.
- III. Masters degree in Nursing (MSN):
The Masters Degree program in Nursing is your way to b an Advance Practicing Nurse (APN) in specialized fields

What about the pay?

In a noble profession such as this, salary is nothing of much concern but Registered Nurses do manage to earn a noble amount of pay as well. Statistics states that average annual salary of an RN in United States ranges from \$39,000 to \$49,000. With experience and higher degrees it is most likely to reach \$79,000 per annum.

Is there any growth in this field?

The population of Registered Nurses is highest among all the Medical Sciences occupations, yet the demand is still not fulfilled. There always been a shortage of Nurses all over the world. Therefore the job opportunities are ever increasing. Once you get a job as a RN, the chances of advancements are never

ending. You can earn a specialization in a specific area and get yourself a leadership position in the team.

Testimonials:

“As I am proudly working as a registered nurse I realized that there isn’t a better choice I could’ve made. I love the way I have to make people feel comfortable and cared everyday. It’s unexplainable how people start to trust you and care for you too. It’s an amazing job. Everyday I learn something new not just from the doctors but also from the patients and their families. All thanks to this degree I have.”
